

MAT DANIA

A Member of MAT Foundry Group

To our Customers

Aars, 12.04.2021

Central Europe is facing a difficult third wave of COVID – 19 cases. In Poland the situation is very critical, and this wave has reached its worst level since the beginning of the pandemic. With one of the highest rates of infections and death rates, Poland is struggling to keep the situation in control.

Our machining facility is located next to Warsaw, the area with one of the highest Covid-19 ratios. Our preventive actions and fast reactions have allowed us to keep production running without major disturbances. Nevertheless, the organization has in the last weeks recorded the highest infection rates and subsequently highest absence rates.

We are kindly asking our customers to have some patience and understanding in case some delays occur. We consider the current critical situation as force majeure, having in mind our long-lasting and reliable relation and hoping for further potential of cooperation. We can assure our customers that we continue to employ and train new people in these difficult times to be able to meet the demand in second quarter.

If you have any questions or need for further demand please contact your sales representative.

Best regards,

MAT DANIA ApS
